Environment Green

Hot Chocolate

Mist Grey

Lagoon Blue

Arctic Blue

Dove Grey

Seagull Grey

Storm Grey

Black

When selecting a colour, it should be remembered that the actual surrounding environment, light intensity and type of light will affect the appearance of the colour. Some colour change may occur with time. Product availability and delivery lead times are variable subject to market conditions, and minimum order quantities may apply. Disclaimer: While every effort has been made to accurately represent the actual product colours in this brochure, owing to the reflective nature of the product finishes and inherent distortions in photographic and printing processes, some variations may occur between the colours as represented in this brochure and the actual colour displayed when products are applied.

Good Practice: While every effort is made to make sure any colour variation is minimised between individual batches of product, best practice when making multiple parts for a job is to make sure they are all manufactured using the same batch of gelcoat under similar ambient conditions with the same catalyst type and level to make sure there is no colour variation between individual components. Before using any product, always check that the colour of the product correctly meets your requirements. Products made under the same colour name by different manufacturers, or made in the past, may not match the colour being produced today and you should always check before use. Ensure you mix the product thoroughly before use and use the catalyst recommended in the technical data sheet.
